

Agenda
Air Permit Streamlining
9 AM to 12:30 PM, September 14, 2005
Department of Natural Resources
Room G09, 101 South Webster Street, Madison

9:00 AM **Welcome, Introductions and Agenda Review**
Caroline Garber, DNR Work Group Leader

Purpose: To present meeting objectives.

9:30 AM **Emission Cap Permits**
Kristin Hart, Air Permit Engineer

Purpose: To present a proposal for next steps in developing an emission cap permit for sources in Wisconsin.

An emission cap permit is an operation permit that caps facility emissions at a specified level and either waives or exempts the facility from certain requirements as long as emissions stay at or below the cap.

10:00 AM **Permit Exemptions and Authorization to Construct**
Jeff Burger and Steve Dunn, Air Permit Engineers

Purpose: To present and get feedback on a straw proposal for creating permit exemptions for sources with low actual emissions and for creating exemptions or permit exclusions for certain modifications.

The types of regulatory triggers that are being examined are those that require the source and the department to take permit-related action but produce little or no environmental benefits.

10:45 AM **Break**

11:00 AM **Consolidated Permit Process**
Jonathan Wright, Dave Minkey, and Tom Zelinski, Air Permit Engineers

Purpose: To present and get feedback on alternative scenarios for a consolidated permit process.

A consolidated permit process is one in which, as much as practicable, all regulatory limitations and other applicable requirements are contained in a single compliance document that satisfies the processing and notification requirements of Title 1 and Title V simultaneously.

12:00 PM **Other Business and Next Steps**
Caroline Garber

12:30 PM **Adjourn**
